EXPERIENCE

Freelance Web Dev Project | Peracity Hotel

2019 - 2020

I've created a website for Peracity Hotel in Ankara. Starting with a meticulously designed wireframe using Figma, then translated the vision into reality using HTML, CSS, and JavaScript. Bootstrap was seamlessly integrated to enhance the website's responsiveness and visual appeal. The end result is a sleek, user-friendly website that provides Peracity Hotel with a modern and engaging online presence.

Freelance Web Dev Project | Kılınç Yapı ve İnşaat

2022 - 2023

Collaborating with Kilinç Yapı İnsaat, designed and implemented a WordPress website. The site efficiently showcases the construction company's portfolio and highlights key projects. Tailored for user-friendliness, this online platform now serves as a powerful tool for Kilinc Yapi İnsaat to connect with a broader audience and demonstrate their expertise.

Freelance Web Dev Project | Büyük Ardahan Oteli

2019 - 2020

I crafted a sleek website for Büyük Ardahan Oteli using basic HTML, CSS, and JavaScript. The site exclusively focuses on showcasing the hotel's amenities, rooms, and reservation features. With a clean and responsive design, the website exemplifies my ability to effectively present Büyük Ardahan Oteli's offerings, providing potential guests with a user-friendly platform to explore and engage with the hotel's offerings.
